Adult Learner

Andragogy—five assumptions about adult learning

- Adults are independent and self directing
 - They have accumulated a great deal of experience, which is a rich resource for learning
 - They value learning that integrates with the demands of their everyday life
 - They are more interested in immediate, problem centred approaches than in subject centred ones
 - They are more motivated to learn by internal drives than by external ones
-

BEHAVIORSME vs CONSTRUCTIVISME

Wat is de rol van de leerkracht?

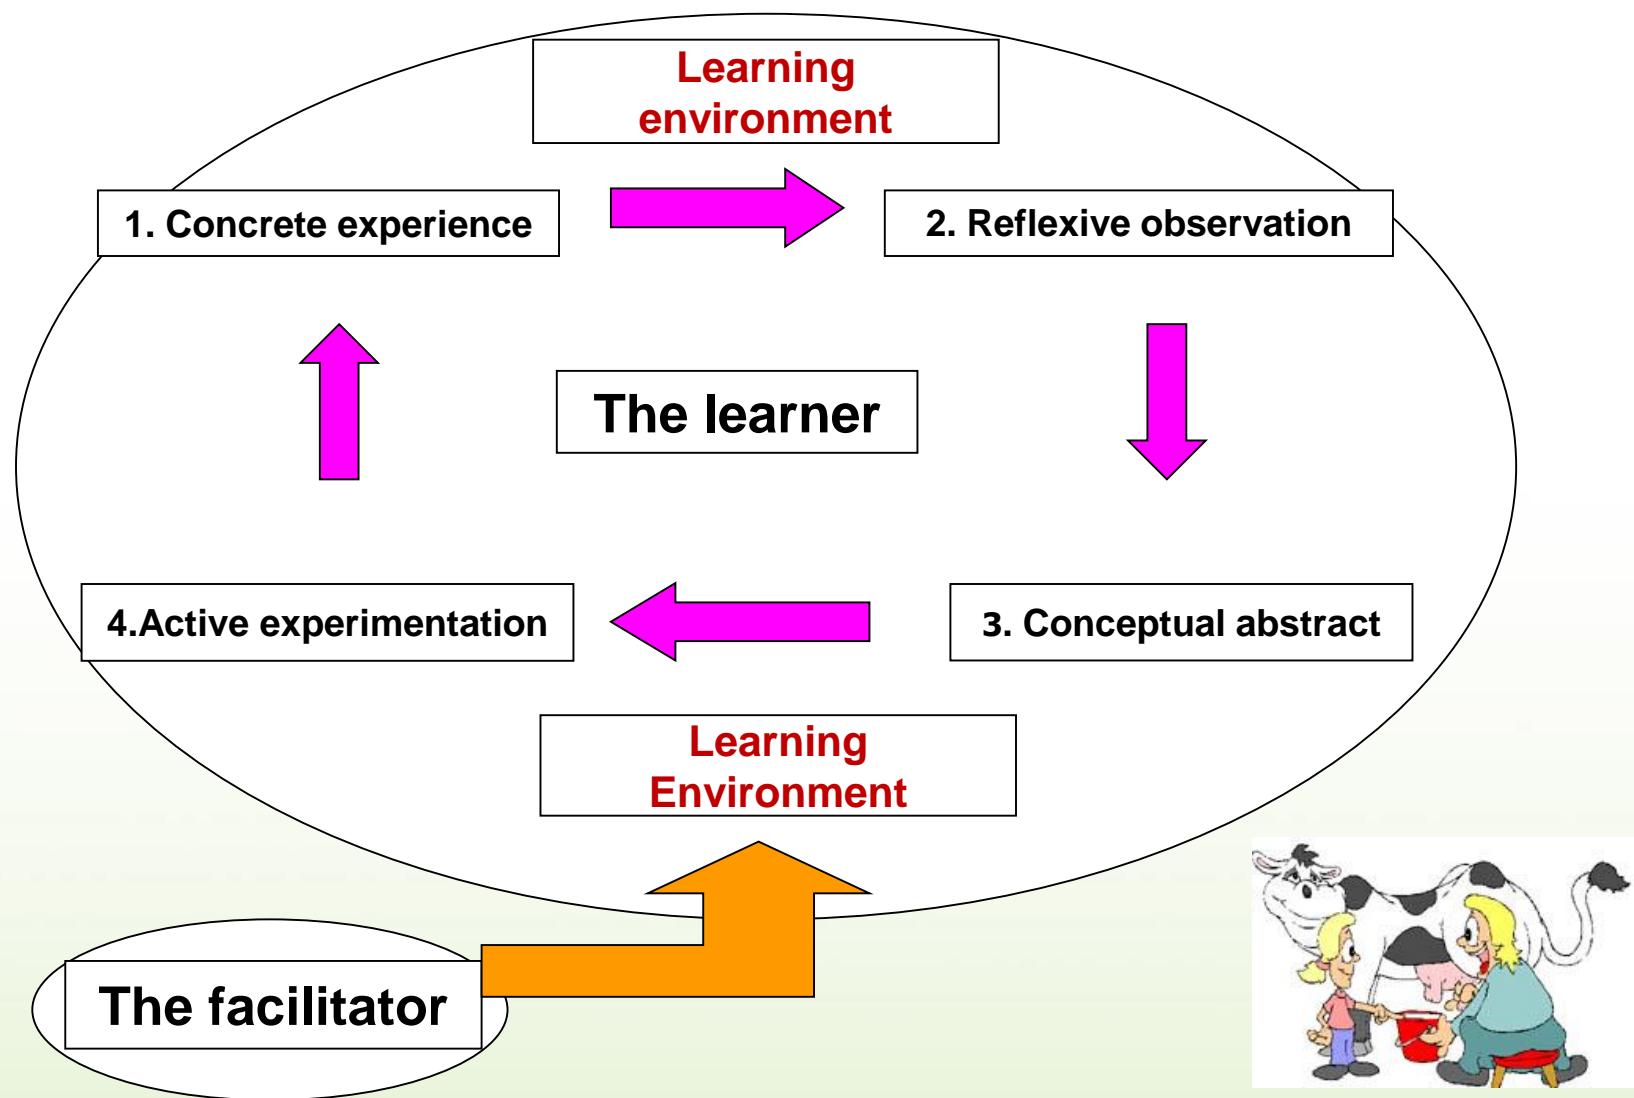

Constructivism

- Students **construct** their own “meaning - knowledge” based on their experience.
- Learning is an active process; a social activity, a contextual process, a life experience - physical and social environment of medical practice
- The **reflective** application of knowledge is integrated into learning, allows the student to develop metacognitive structures and construct meanings
- Students must use the significant knowledge that they have learned (prior knowledge)
- Motivation plays a transcendental role

“learn to learn”, reflect on own learning process

Three conditions that facilitate learning

1. Activation of prior knowledge

- Earlier knowledge used in understanding new information
- Everyone have prior knowledge about some problem, but at not same level
- When the first year student of medical school got a scenario about tuberculosis, they will remember and use their biology science from high school
- When same scenario gave to 4-th year medical school student, they will remember much better because they are already learn about tuberculosis at medical school. They will know more detail about tuberculosis and apply it to solve the problem.

Three conditions that facilitate learning

2. Encoding specificity

- The closer the resemblance between the situation in which something is learned and the situation in which it is applied, the better the performance
- Encoding specificity:
 - High prevalence
 - Life threatening/ urgent
 - potential serious outcomes
 - poorly handled/ often missed

Three conditions that facilitate learning

3. Elaboration of knowledge

- Information is better understood, processed, and retrieved if students have an opportunity to elaborate on that information
- Elaboration provide redundancy in the memory structure
- Paraphrase in important

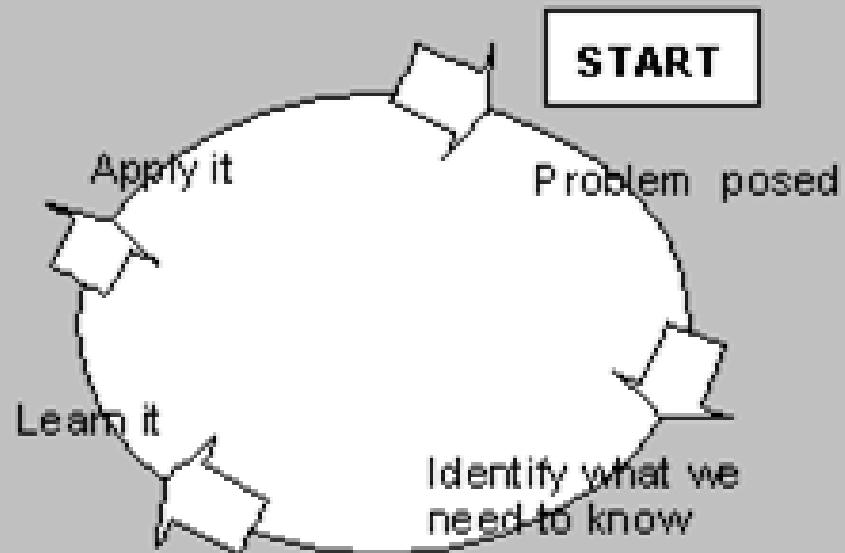

Case-Based Method

- Problem-Based Learning: The process of acquiring new knowledge based on recognition of a need to learn
- Problem-Solving: Arriving at decisions based on prior knowledge and reasoning

Which one to choose?

Problem-Based Learning

Subject-Based Learning **(Problem Solving)**

Given problem to
illustrate how to use it

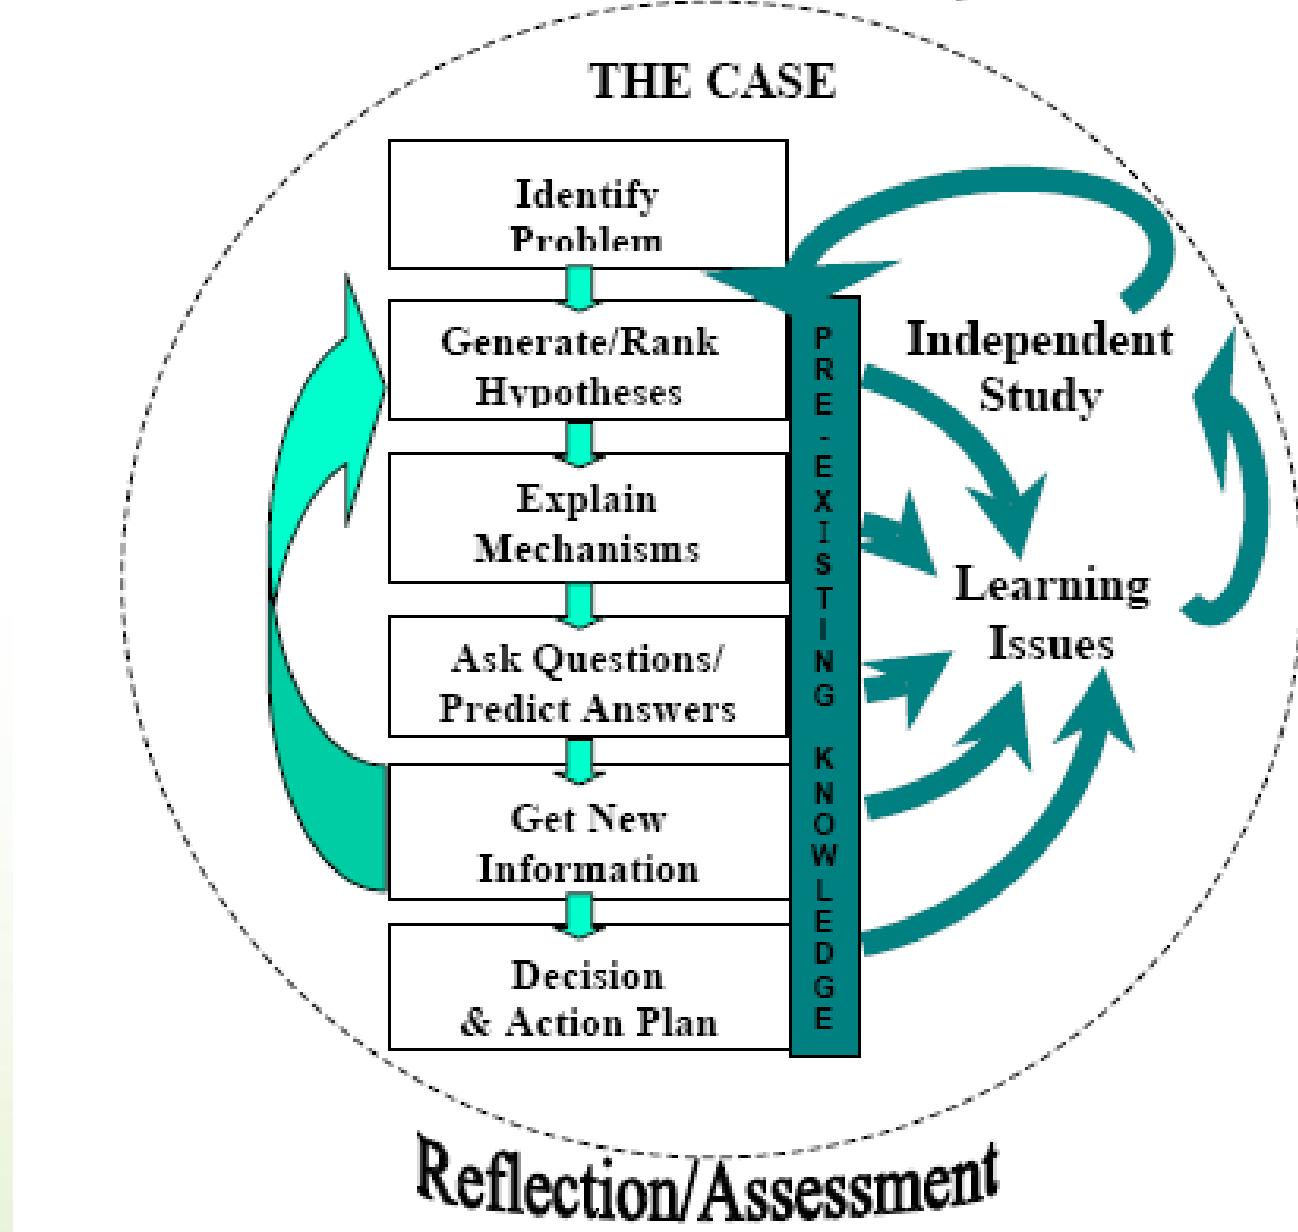

Told what we
need to know

| PROBLEM SOLVING | PROBLEM-BASED LEARNING |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none">- The focus is on preparatory learning prior to exposure to the problem.- The teacher set the problems (case history problems in a primarily lecture-based format), and students attempt to resolve them using previously taught curricular content. | <ul style="list-style-type: none">- The problem comes first without advance readings, lectures, or preparation.- The problem serves as a stimulus for the need to know.- Based on their own prior knowledge and the identified gaps in that knowledge, students determine the learning issues within their own group. They then identify and use a variety of learning resources to study these issues and return to the group to discuss and share what they have learned. |
| Usefull for application of knowledge | Usefull for basic concept Showing relevance of basic science to professional practice |

The case
serves as
a stimulus
for
learning

Getting Started

Seven Jump

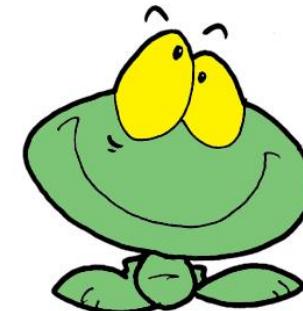

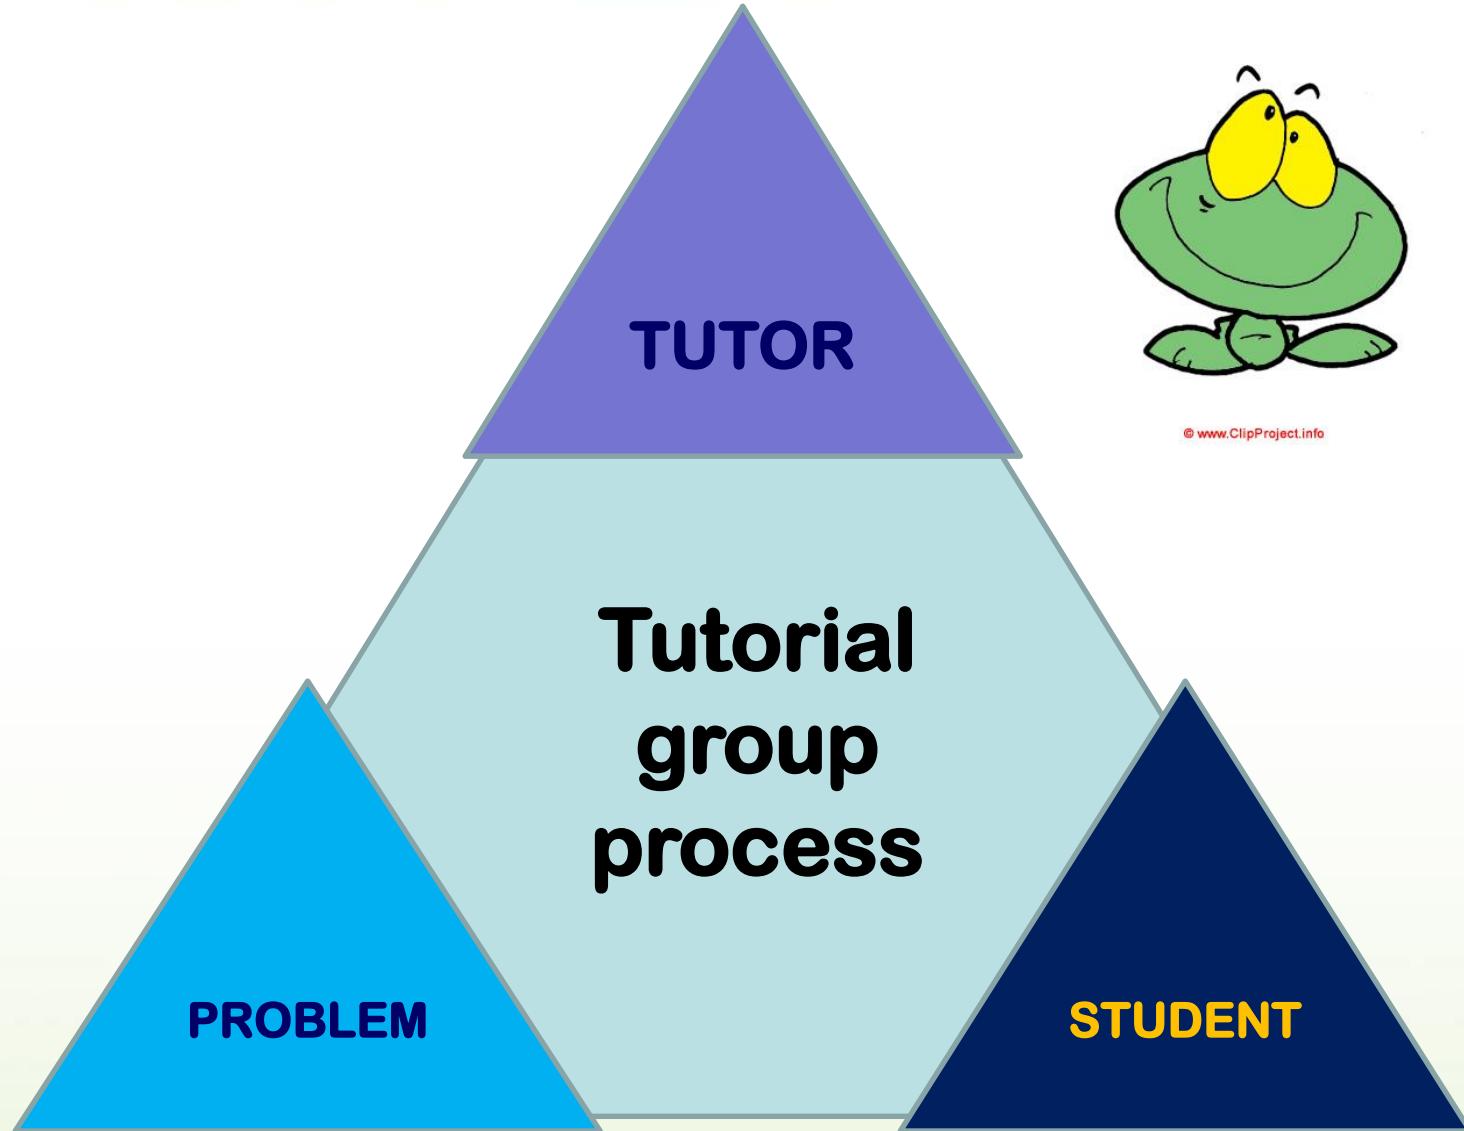

- STEP 1. Clarify Unfamiliar Terms**
- STEP 2. Define the PROBLEM (s)**
- STEP 3. Brainstorm Possible Hypothesis or Explanation**
- STEP 4. Arrange Explanation into a Tentative Solution**
- STEP 5. Define Learning Objective**
- STEP 6. Information Gathering and Private Study**
- STEP 7. Share the Results of Information Gathering and Private Study**

Pucatnya Nona Anne

Nona Anne, 18 tahun dibawa ibunya konsultasi ke dokter Puskesmas dengan keluhan sering merasakan pusing sejak 2 bulan yang lalu. Dari anamnesis didapatkan bahwa Nona Anne sejak 4 bulan yang lalu melakukan diet ketat dengan mengurangi semua jenis makanan. Saat ini badannya terasa gemetaran dan telapak tangannya terlihat pucat. Sewaktu naik tangga di kampusnya, Nona Anne merasakan lelah yang berlebihan dan berusaha menarik nafas yang panjang untuk mengurangi rasa sesak yang dirasakannya. Dokter juga menanyakan keadaan anggota keluarga, apakah ada riwayat yang sama dengan Nona Anne.

Dokter melihat sediaan apus darah tepi nona Anne, ditemukan eritrosit mikrositik hipokromik. Nona Anne diberi obat tambah darah dan dianjurkan kontrol 1 bulan yang akan datang. Ibu Anne menyampaikan kekhawatirannya kepada dokter apakah Anne juga memerlukan rujukan dan pemeriksaan sumsum tulang seperti yang dialami oleh saudara sepupu laki-lakinya, karena keluhan pucat dan mudah letih yang dialaminya.

Bagaimana anda menjelaskan apa yang terjadi pada Nona Anne?

Capaian Pembelajaran Mata Kuliah

- Menjelaskan pengertian dan jenis anemia
- Menjelaskan epidemiologi, etiologi, faktor risiko pada anemia
- Menjelaskan patogenesis dan patofisiologi anemia
- Menjelaskan gejala dan tanda anemia
- Menjelaskan prinsip diagnosis anemia
- Menjelaskan pemeriksaan laboratorium yang diperlukan untuk menunjang diagnosis anemia

Concept

© www.ClipProject.info

- **Basic principles, key information, or fundamental mechanisms around which a series of notions is organized that permit students to analyze the problem which is presented to them**
- **The concepts includes its own explanation**

.....Concept

- The points that will be related (cause, result) with an explanation, not just a title or statement or task
- The wording of a concept must be precise enough so that a specific message is delivered
- The students have to find, and understand the concepts which are embedded in the problem, and it could be used for many cases

Concepts and Mapping (1)

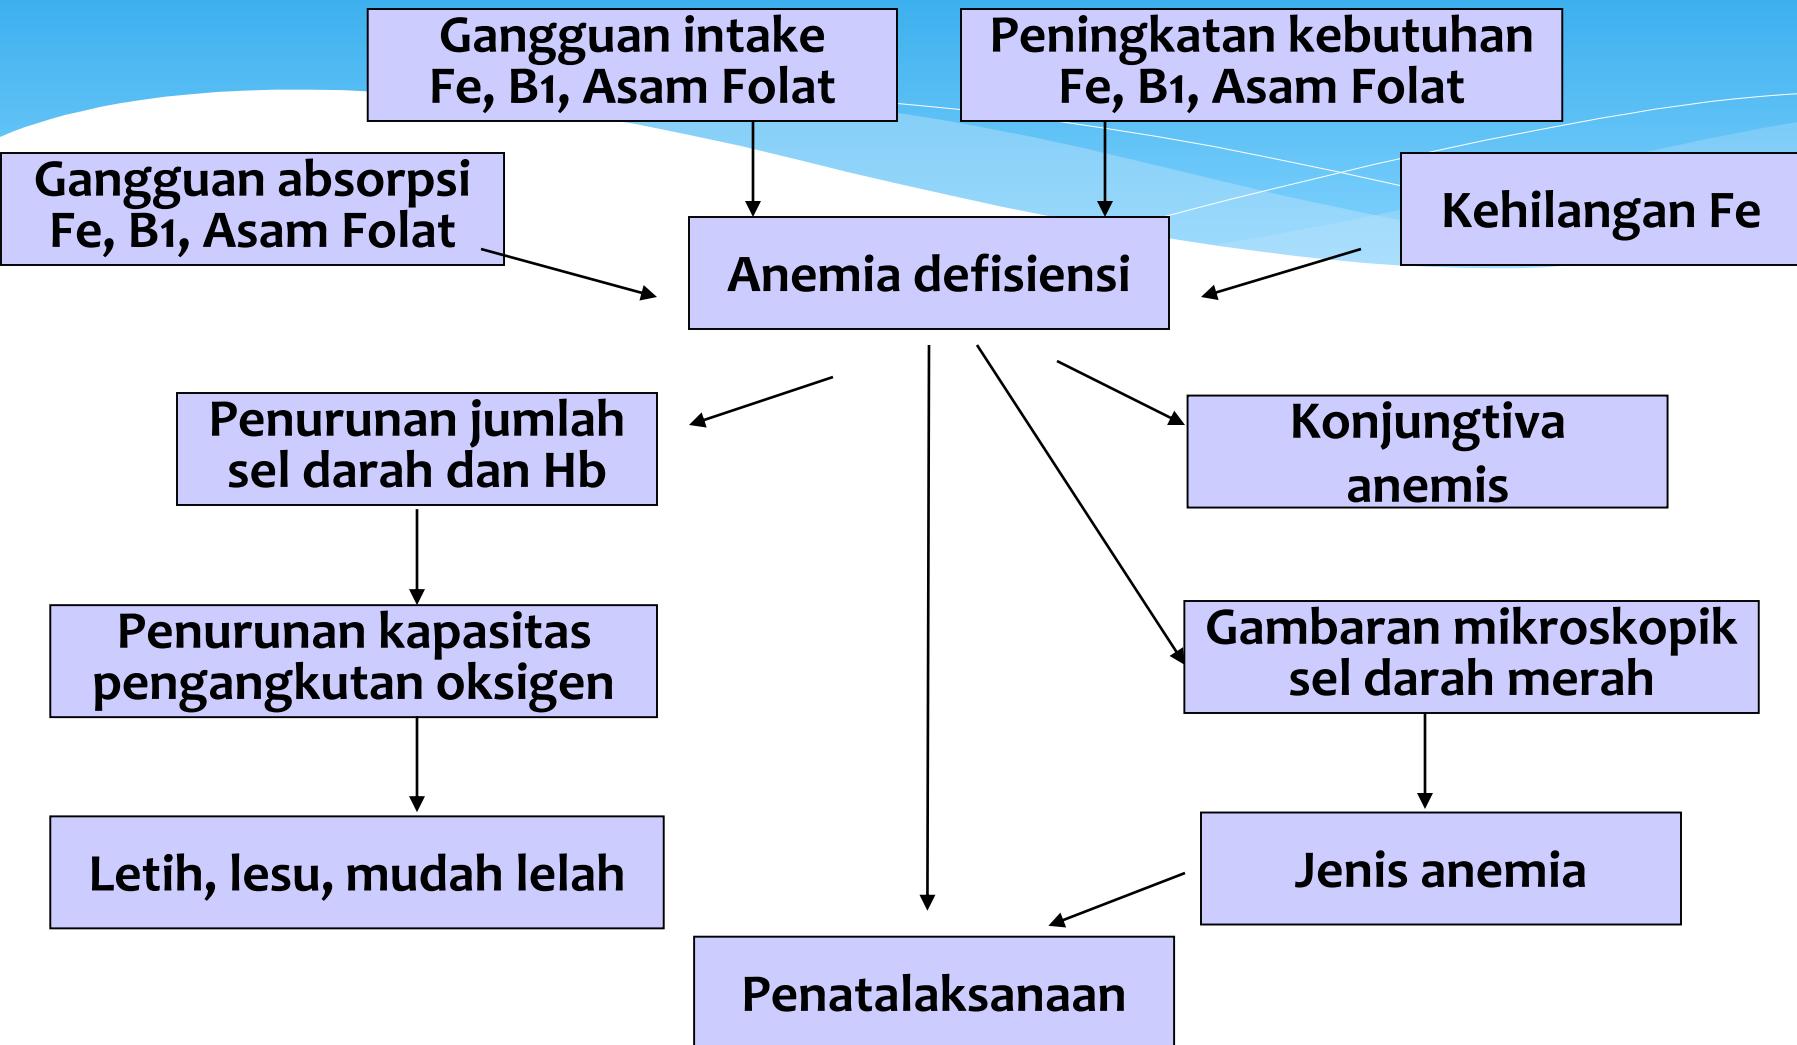

- 1. Gangguan absorpsi dan intake zat besi, vitamin B12, asam folat, kehilangan Fe dan peningkatan kebutuhan Fe dapat menyebabkan anemia defisiensi**
- 2. Penurunan jumlah sel darah merah atau jumlah hemoglobin akan menurunkan kapasitas pengangkutan oksigen yang mengakibatkan timbulnya keluhan letih, lesu dan mudah lelah**

....Concepts and Mapping (1)

3. Penurunan kadar Hb dapat diketahui dari pemeriksaan konjungtiva yang anemis
4. Jenis anemia dapat ditentukan oleh gambaran mikroskopik sel darah merah pada apusan darah tepi
5. Penatalaksanaan anemia tergantung pada penyebab terjadinya anemia

Concepts and Mapping (1)

Tutorial Evaluation

Evaluation on:

- Group-functioning (proses tutorial)
- Students performances
- Tutor performances

Using:

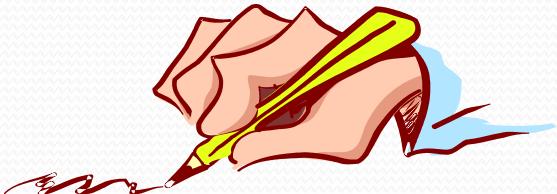

- Checklist
- Scoring (tutorial)
- Block evaluation-----end of the block

.....Tutorial Evaluation

For example:

- **Each student is assessed on the following characteristics:**
 1. Follows discussion actively
 2. Asks relevant questions spontaneously
 3. Presents hypothesis, facts and homework done clearly
 4. Analyses hypothesis critically and suggests course of action when in difficulty.

.....Tutorial Evaluation

For example (cont):

- **The assessment:**
will take the form of grading students' performance on the scheme shown below

- **Characteristics demonstrated by student**

| | |
|-----------------------------|---|
| All four above | 4 |
| Any three | 3 |
| Any two | 2 |
| One only | 1 |
| Absent without valid reason | 0 |

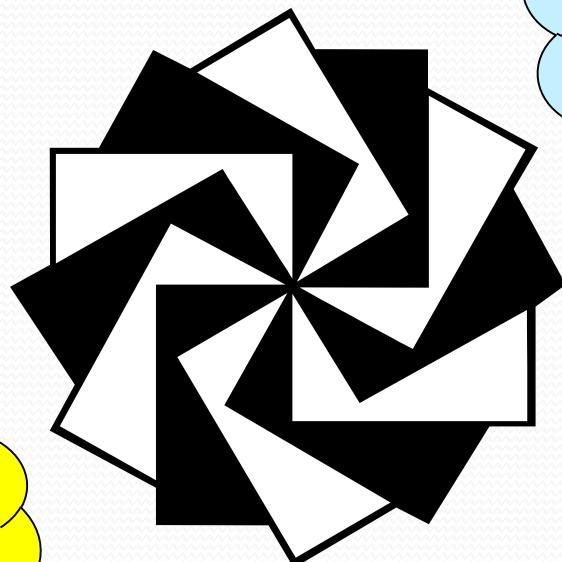

Roles of Tutor

**Facilitating
Learning
Process**

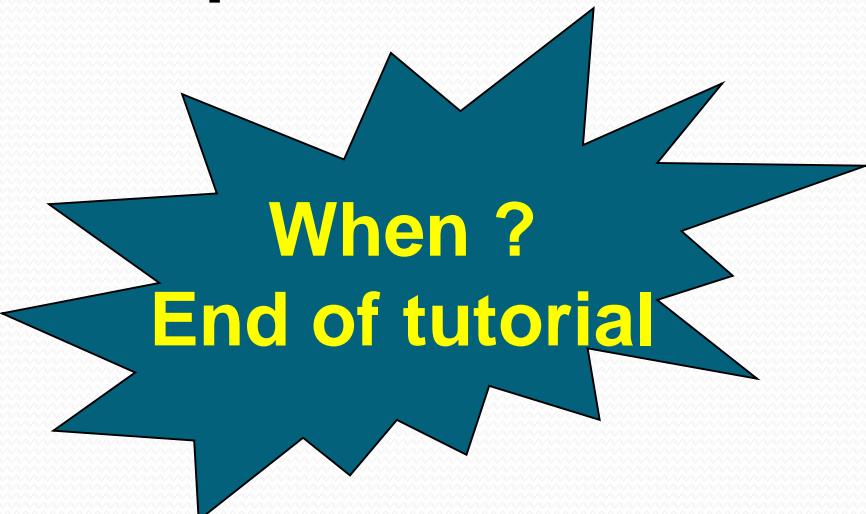

**Facilitating
Self-Directed
Learning**

**Facilitating
Group
Process**

Feedback

- Descriptive
- Non evaluative
- Specific performance
- Non personal attributes

Contract
Tell them you are
giving them feedback

No scoring

Pendleton's Rules

Self assessment by learner to acknowledge what was done well

What was done well reinforced by facilitator group

Skills used to achieve successful outcomes discussed

Self-assessment by learners-what could have done better-analyses alternative skills

Facilitator/group suggests alternatives skills is necessary

Learner feedback to the facilitator-content of feedback and skills
